Mistake	Why it failed	Replaced with	Fixed by
Beeswarm plot for discrete data	No vertical spread, couldn't see density	Box plot + Violin plot with box overlay	NaN
Too many histogram bins (sqrt rule on integer data)	86 bins for 35-day range → empty bins, 'comb' effect	Integer-aligned bins (discrete) or FD rule (continuous)	NaN
KDE on discrete/bounded data	Density extends below 0 (impossible), subjective bandwidth	Log-transformed histogram for continuous; skip for integer	NaN
Q-Q plot on bounded-at-zero data	Always shows deviation at lower tail (bounded vs unbounded)	ECDF + subgroup split; Q-Q only for unbounded variables	NaN
Describing distribution without checking subgroups	Hospital days appeared bimodal → actually 4 unimodal severity groups	Always check subgroups before describing shape	NaN
ECDF x-axis starting at -2000	Cases can't be negative, misleading visualization	NaN	Set xlim starting at 0
